CANOPY / CROP HEALTH

Observation report

Record #3 | 2026-10-28T19:44:46.521579+00:00

Field: Verification field (test data) | Crop: Tomato

Assessment

Status: model unavailable

Possible class: No prediction

No trained checkpoint is installed. Observation saved without a disease prediction.

Very low contrast; retake a detailed leaf photograph.

Field notes

Integration fixture: solid-color test image. This is not a crop diagnosis or research result.

Guidance and limitations

Disease-specific guidance is not available for this class.

Record symptoms, photograph the whole plant and affected leaves, and contact a local agricultural extension service.

Image classification is not a confirmed diagnosis. Seek qualified local advice before treatment. Weather does not prove infection.

Changes between model predictions alone do not establish progression or recovery.
